

Sahara Rai

SOFTWARE ENGINEER

Education

PGCE

Postgraduate Certificate in Education
University of Canterbury
2019-2020

PhD

Exercise Metabolism
University of Birmingham
2012-2017

MSc

Biolmaging
University of Sussex
2010-2011

Tech Tools

CSS

Node.js

Git

PostgreSQL

HTML

React.js

Heroku

TypeScript

Javascript
(ES6)

About me

A highly motivated software engineer, seeking to use my problem solving skills developed during my academic and teaching career and apply them working in a tech team.

Software engineering experience

School of code / November 2021 - Present

During my training at the School of Code, I have learnt not just how to code but I have most importantly learnt how to effectively learn programming using any tech tool. I learned the principles of software development and computational thinking, and the importance of user experience when developing software. Pair programming has been the fundamental method of learning during the training, which I found it to be a very efficient method of learning as it helped articulate my thoughts and allowed dynamic sharing of knowledge with my peers.

After learning HTML, CSS and JavaScript, I then progressed to working with libraries and frameworks such as React, Node.js, Express, Next, and working with databases using PostgreSQL.

Further Tools and Methodologies

- Figma
- Jest Testing
- Postman
- REST API
- Next.js

- Agile
- Pair Programming
- Trello
- User Research
- UX Design
- UI Design

Software engineering experience (continued)

- For ongoing main collaborative project, my team consisting of 6 developers, are building an app that allows users to post and/or apply for any odd jobs locally such as gardening and cleaning. Adopting AGILE methodology, we are working asynchronously similar to a real work environment with regular standups and retrospectives.
- I worked on the development of RESTful API for creating and listing jobs using Express, and used PostgreSQL to interact with database hosted at Heroku. Currently, I am working in the front-end of the project using Next.js.

Job Experience

Teacher of Science

John Wallis Academy | 2020-2021

- Prepared and delivered lessons to classes of different ages and abilities using use a range of different learning resources and equipment including during remote learning during the pandemic lockdown
- Delivered a range of science practical lessons
- Undertook pastoral duties as a form tutor
- Communicated with parents and carers over pupils' progress
